

# Embossed VCI Poly Wrap

## Bearing Tape Stays Tight, Prevents Corrosion on Precision Machined Metals

- Corrosion inhibitor (VCI) film with an embossed texture that grips, stays in place around large bearings and round shapes. Used as a final wrap, the VCI bearing tape holds layers of rust inhibiting materials together.
- Premium Metal-Guard® VCI in the film effectively prevents corrosion on packaged steel, stainless steel, cast iron, galvanized, nickel and nickel-plated, copper and a wide range of ferrous/non-ferrous metals. *Also available as non-VCI bearing wrap.*
- Provides long-term protection against corrosive effects of moisture, salt and other contaminants without extra cost of addition packaging such as bags or bands.
- Film is tear-resistant, strong, durable and flexible.
- Use in automatic packaging of bearings and precision machined parts to dramatically increase speed of production output.
- Best for applications where high strength, stretch, and corrosion protection are needed.
- Recyclable; RoHS and TRGS615 compliant; odorless, non-toxic, easy to handle and safe to use.
- *Available in Daubert® blue, black, white, and a range of colors, roll widths and lengths.*
